<b>CONCLUSION.....</b>	<b>61</b>

## **INTRODUCTION**

Cinema is a public place for people to watch newly released movies. It is a place tend to get busy and crowded that even may cause unintended problems like a long queue to the counter, lack of employees to serve, miscommunication, etc. To counter these problems, I had created an interface so called the Movie Box Cinema. It is a GUI (Graphical User Interface), that shows how the interface would look like if it were in a website for a cinema official site. The use of this interface is to let people buy their favoured movies via online, and this way will make people cut less time and energy to even go at the cinema to buy movie ticket.

The interface that I had been created seem simple as my target is to let people use and see it without any problem to understand and purchase their movies. This created interface will be more efficient as a mechanism to purchase movie online than being at the counter.

## **OBJECTIVES**

1. To get data from user to login as a member.
2. To register for an unregistered customer/user.
3. To display multiple choices of movies.
4. To display the description of every movies being chose.
5. To let user buys the movie.

## **JAVA CODE**

}

```

## **OBJECT ORIENTED CONCEPT IMPLEMENTATION**

### 1. Object & Classes

```
public class MovieBoxCinemaBI19160330 extends JFrame implements MouseListener{
    private JFrame frame;
    JLabel lblPic;
    Timer timer;
    int x = 0;

    //image banner name is moviel.jpg, etc..
    String[] picList = {"movie1.jpg", "movie2.jpg", "movie3.jpg", "movie4.jpg"};

    private JLabel picMovie1;
    private JLabel picMovie2;
    private JLabel picMovie3;
    private JLabel picMovie4;
    private JLabel lblMovie1Name;
    private JLabel lblMovie2Name;
    private JLabel lblMovie3Name;
    private JLabel lblMovie4Name;
    String username;
```

### 2. Abstraction

```
frame.getContentPane().setBackground(Color.BLACK);
frame.setBounds(100, 100, 659, 573);
frame.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
frame.getContentPane().setLayout(null);
setUsername(username);
initialize();
```

### 3. Interface

```
lblPic = new JLabel("New label");
lblPic.setBounds(53, 52, 547, 152);
frame.getContentPane().add(lblPic);
setImageSize(3);
timer = new Timer(2000, new ActionListener() {
    @Override
    public void actionPerformed(ActionEvent e) {
        setImageSize(x);
        x += 1;
        if (x >= picList.length)
            x = 0;
    }
});
```

#### 4. Inner Class

```
JLabel lblQty = new JLabel("Quantity");
lblQty.setForeground(Color.WHITE);
lblQty.setFont(new Font("Tahoma", Font.PLAIN, 12));
lblQty.setBounds(240, 381, 48, 14);
frame.getContentPane().add(lblQty);
btnBuy.addActionListener(this);
}

@Override
public void actionPerformed(ActionEvent e) {
    if (e.getSource() == btnBuy) {
        PrintWriter out = null;
        try {
            //get time and date

```

#### 5. Encapsulation

##### a. Public static void main

```
public static void main(String[] args) {
    EventQueue.invokeLater(new Runnable() {
        public void run() {
            try {

            } catch (Exception e) {
                e.printStackTrace();
            }
        }
    });
}
```

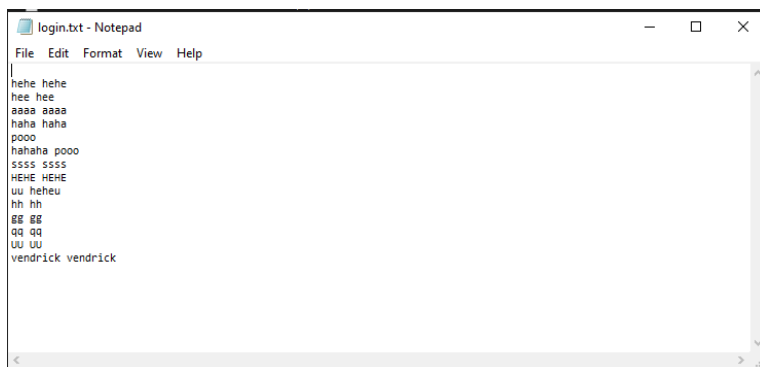

##### b. Public void action performed

```
public void actionPerformed(ActionEvent e) {
    if (e.getSource() == btnBuy) {
        PrintWriter out = null;
        try {
            //get time and date
            DateTimeFormatter dtf = DateTimeFormatter.ofPattern("yyyy/MM/dd HH:mm:ss");
            LocalDateTime now = LocalDateTime.now();

            //for total price. SpinnerQuantity value * price
            //you can change the price as you wish
            Double totalPrice = Double.parseDouble(spinnerQuantity.getValue().toString()) * 16;
            out = new PrintWriter(new BufferedWriter(new FileWriter("invoice.txt", false)));
            out.println("Movie Title : " + Title.getText() + "\nDuration : " + Duration.getText() + "\nBuyer Username : " + Username.getText());
            JOptionPane.showMessageDialog(contentPane, "Movie has been bought. Invoice is created!");
            MovieBoxCinemaBI19160330 log = new MovieBoxCinemaBI19160330(username);
            log.setVisible(true);
            frame.dispose();
        } catch (IOException ex) {
            ex.printStackTrace();
        } finally {
            if (out != null) {
                out.close();
            }
        }
    }
}
```

## **READ AND WRITE IMPLEMENTATION**

In this project, an interaction between the user and the programme are needed to make everything works. The user need to give inputs to the programme so that the programme can do what is the user wanted. To get to the main site or homepage of the cinema interface, user needs to login their account by typing their username and password. By doing this this, a txt file is created (login.txt) to store and get the data for the programme as a storage so that after the user created an account, the user will be able to login his/her account. This file is located at the directory of this project so that the programme can find and process everything.

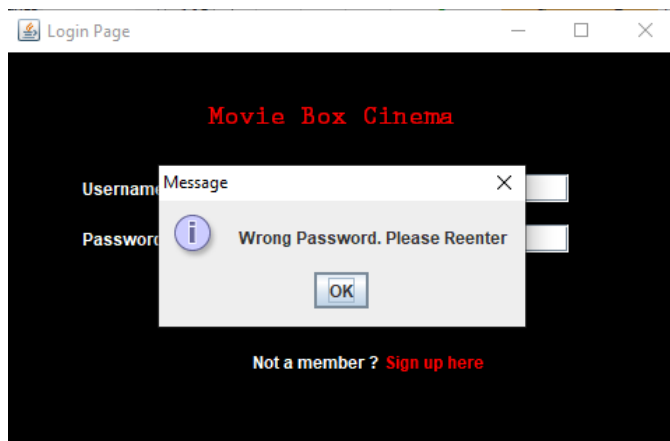

If the user creates an account that has already been created during signing up, a pop up message will show "Username already existed!". The user needs to pick another username to be able to sign up. This shows that the programme reads the data stored in the txt file and warns the user.

An account that has been created can directly login and go to the main page but if the password entered wrong. It will show a sign saying "Wrong password. Please Reenter", this mean the user need to type in the right password.

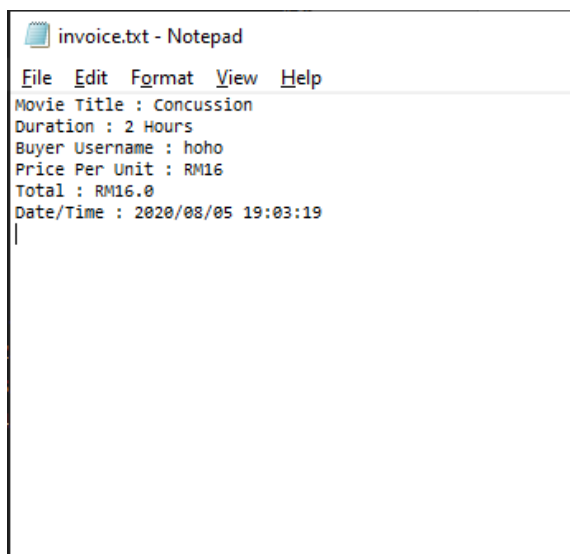

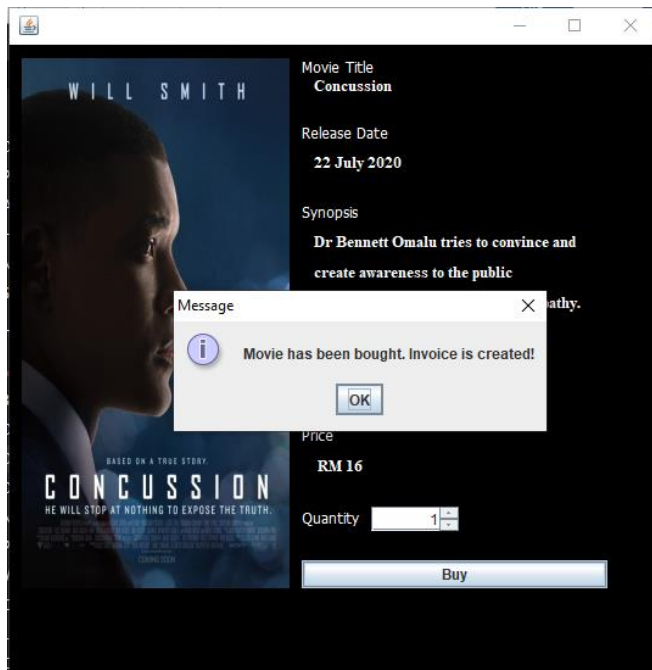

In the main page, there will be an animation of movies going around and four (4) movies are listed to be clicked on. These movies that being displayed are files of jpg file that are located in the directory of this project. This lets the programme to run and display the pictures of these movies.

 movie1.jpg	5/8/2020 1:11 AM	JPG File	214 KB
 movie2.jpg	5/8/2020 1:14 AM	JPG File	45 KB
 movie3.jpg	5/8/2020 1:18 AM	JPG File	121 KB
 movie4.jpg	5/8/2020 1:20 AM	JPG File	102 KB
 small_movie_1.jpg	4/8/2020 11:58 PM	JPG File	69 KB
 small_movie_2.jpg	5/8/2020 12:03 AM	JPG File	1,601 KB
 small_movie_3.jpg	5/8/2020 12:26 AM	JPG File	192 KB
 small_movie_4.jpg	5/8/2020 12:27 AM	JPG File	60 KB

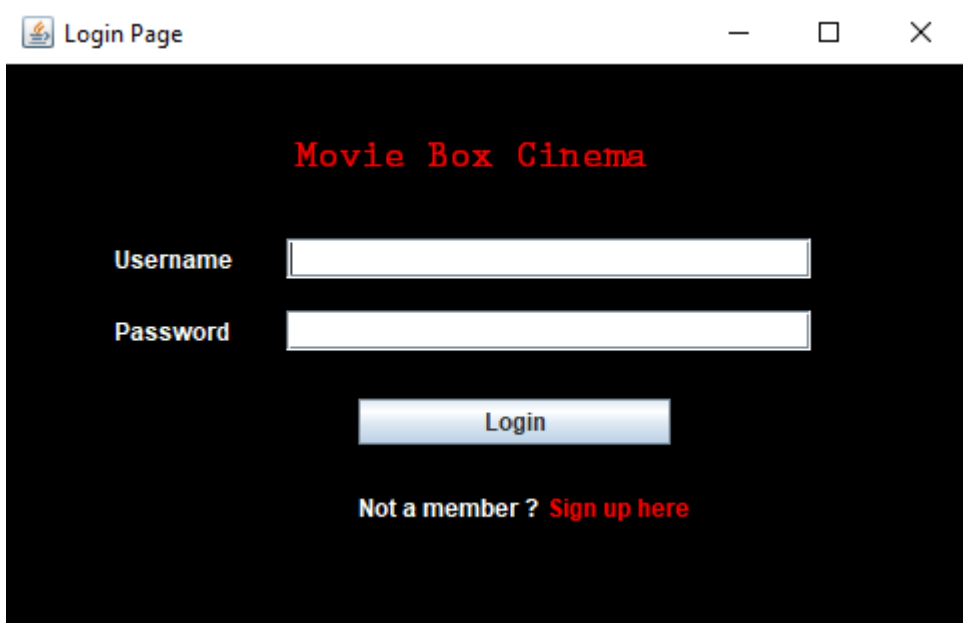

If one these four movies is clicked, a display of description will show and click on the quantity to be picked. After that click on 'Buy' button to confirm the purchase of the movie and a message will pop up and invoice is generated in a txt file found in the directory.

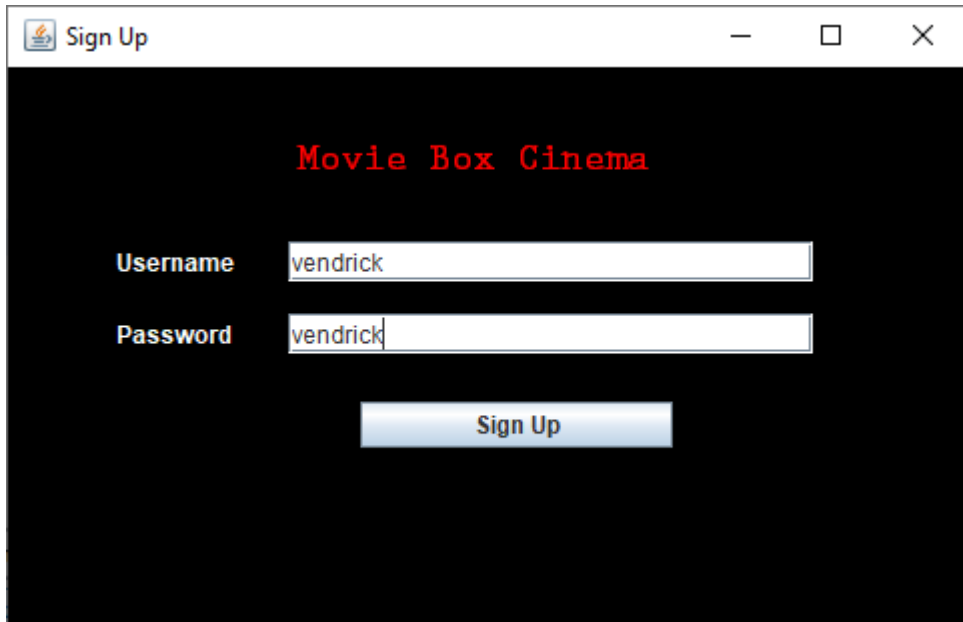

## USER MANUAL

1. User has to login before entering to homepage. Fill in the username and password.

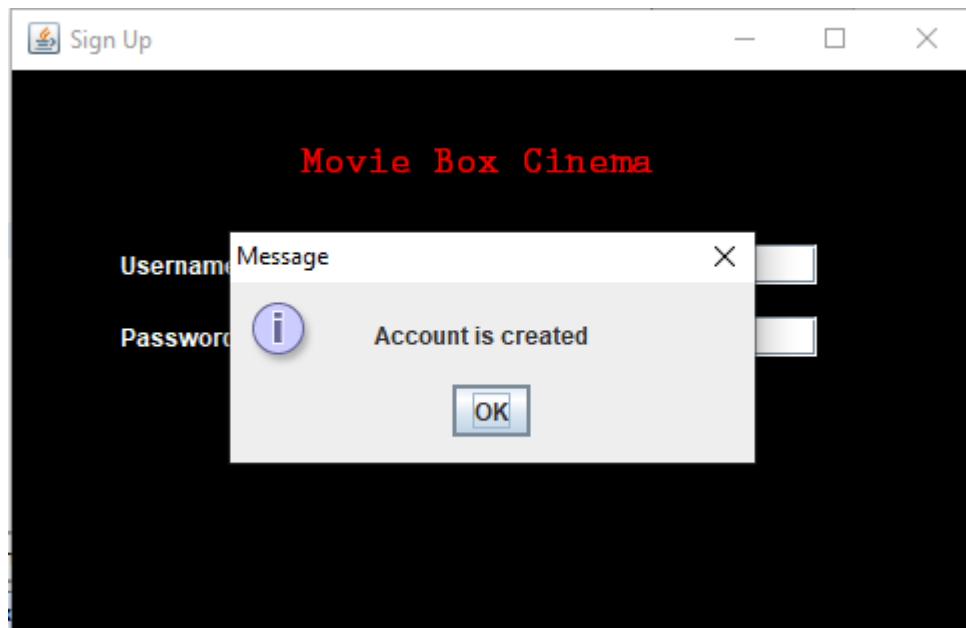

The screenshot shows a web browser window titled "Login Page". The background is black. At the top center, the text "Movie Box Cinema" is displayed in a red, monospace-style font. Below this, there are two white input fields. The first is labeled "Username" and the second is labeled "Password". Below the password field is a blue button with the text "Login". At the bottom, there is a link that says "Not a member ? Sign up here" in red text.

2. If user does not have an account, click on Sign Up Here. If user has an account proceed to click on Login.

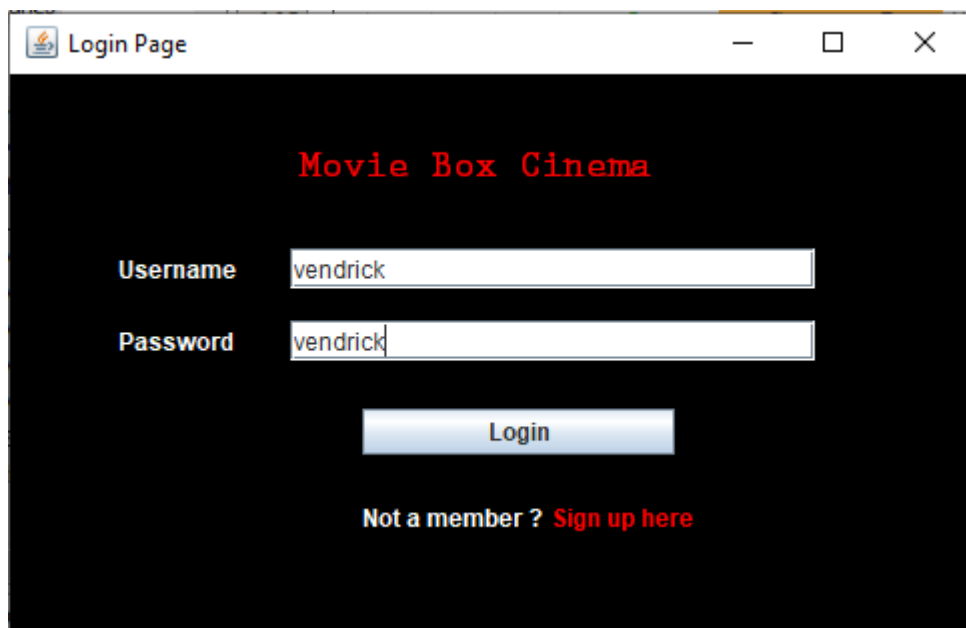

The screenshot shows a web browser window titled "Sign Up". The background is black. At the top center, the text "Movie Box Cinema" is displayed in a red, monospace-style font. Below this, there are two white input fields. The first is labeled "Username" and contains the text "vendrick". The second is labeled "Password" and also contains the text "vendrick". Below the password field is a blue button with the text "Sign Up".

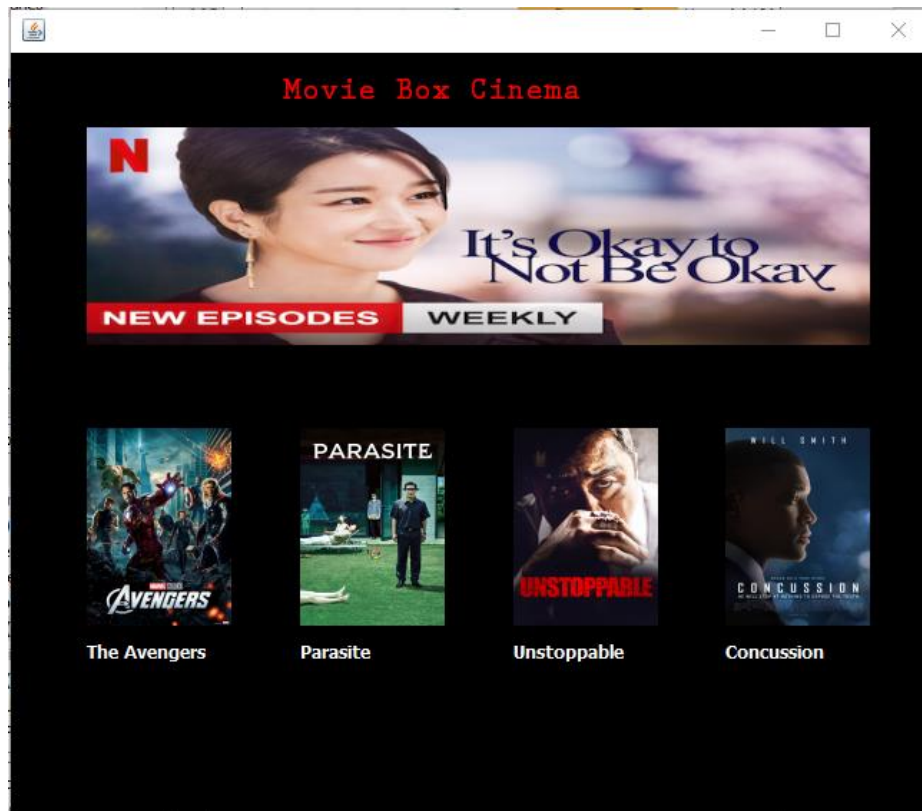

3. If account is created, a message will pop up as below.

4. You will be directly to Login page right after closing the message or click 'OK'. Now, fill in your username and password that you have created then click 'Login'.

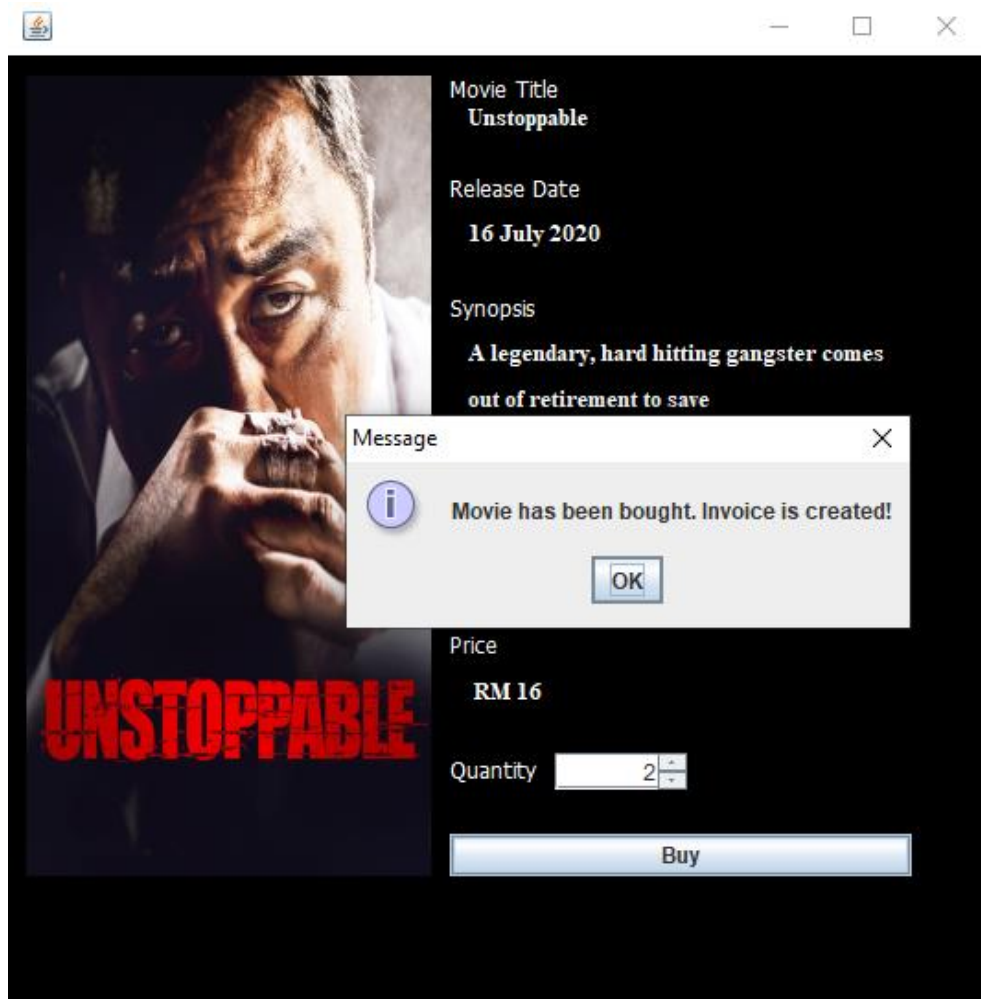

5. The main page of the interface will show up. You will see 4 listed movies are showing up and each movie can be selected or choose to purchase.

6. Click any one of the movie you would like to buy and choose how many ticket you wish to buy for (quantity).

7. After that, click the button 'Buy', you will be shown a pop up message saying "Movie has been bought. Invoice is created!". Then, click on 'OK', you will directly go to the main page again. If you wish to purchase other movies, repeat step 5 to 7.

## **CONCLUSION**

To conclude everything in this project, every objective of this project has been reached as it runs on simulator (Java). This project involves implementation of JAVA GUI and concepts of OOP (Object-Oriented Programme) which are a part of the requirements of this project as well as the read and write implementation. This project

As a first-timer to experience doing this, it takes time to complete and finish this work fine. However, of doing this project, I get to expand my knowledge even more in Java along the way. Lastly, any improvement can be done if it is needed to make the interface even more better in the future.
